

CourtConnect: Corruption Reporting System

Prepared by: Student Name

Course: Software Engineering / Information Systems

Section: Section A

Introduction

CourtConnect is a web-based corruption reporting system designed to help citizens report misconduct, unsafe public services, bribery, and governance issues in a secure and organized manner. The system allows users to submit reports, track their status, and interact with administrative dashboards. It also includes a machine learning component that predicts the category of a report based on the description entered by the reporter.

System Modules

- **User Authentication Module:** Handles login, registration, and user access control.
- **Report Submission Module:** Enables users to create reports with title, description, category, severity, location, and evidence files.
- **Report Management Module:** Allows administrators to review, update, and manage report statuses and comments.
- **Dashboard Module:** Provides separate dashboards for regular users and administrators to monitor reports and performance.
- **Machine Learning Module:** Uses a trained classifier to predict the category of a report based on its description.
- **API Module:** Exposes report data and prediction endpoints for integration or testing.

System Screenshots and Explanation

The system includes several key interfaces that support the reporting workflow.

1. Login Page

The login page allows registered users to securely access the application. It includes authentication controls and a visible captcha confirmation to reduce automated access.

2. Report Form

The report submission form collects details such as report title, description, category, severity, location, department, and evidence file, ensuring complete reporting.

3. Dashboard

The dashboard presents important information such as the number of reports created, resolved, and still pending, with different views for users and administrators.

4. Report Detail Page

The detail page shows report information and allows comments or updates to be added, making the reporting process transparent and trackable.

Real-World Application

CourtConnect can be applied in government agencies, public service offices, and civic organizations to make reporting misconduct easier and more transparent. It gives citizens a reliable digital method to report corruption and unsafe practices while enabling authorities to process and track complaints more efficiently.

Conclusion

In conclusion, CourtConnect provides an effective and practical solution for managing corruption reports. Its combination of user-friendly interfaces, administrative tools, and machine learning support makes it a valuable system for improving accountability and public service transparency.
